

ABHIJEET CHAVAN

Research Intern, AI | NLP & Deep Learning | Generative AI | Python Developer

+91 9823237106 ✉ abhijeetchavan1435@gmail.com  [abhijeet chavan](#)  [abhijeet chavan](#)

Summary

B.E. graduate (2025) in Computer Science – AI & Data Science, **available full-time for the next 3–6 months**. Hands-on experience with **AI/ML projects, deep learning, NLP, and Python-based model development**. Proficient in **Scikit-learn, NumPy, Pandas** with working knowledge of **TensorFlow and PyTorch frameworks**. Experienced in **data collection, annotation, validation, and ML model integration into production environments**. Familiar with **Generative AI concepts, LLMs, RAG architectures, and statistical modelling**. Passionate about contributing to **cutting-edge AI/ML research**, prototyping AI-based products, and advancing NLP, speech, and computer vision solutions at **SHL's AI team**.

Skills

AI & Deep Learning: Artificial Neural Networks (ANN), Deep Learning, TensorFlow, PyTorch, Scikit-learn, Backpropagation, Hyperparameter Tuning, Neural Network Architectures
NLP & Generative AI: Natural Language Processing (NLP), Large Language Models (LLMs), Generative AI Concepts, RAG (Retrieval-Augmented Generation), Multimodal AI, Text Classification
Speech & Vision: Audio/Speech Processing Concepts, Computer Vision Fundamentals, Signal Analysis, Feature Extraction
ML Engineering: Model Prototyping, ML Pipeline Development, Performance Monitoring, Scalable ML Integration, Data Annotation & Validation, Statistical Modelling, Mathematical Optimisation
Programming & Tools: Python (Pandas, NumPy, Matplotlib, Scikit-learn), SQL, REST APIs, Git, Jupyter Notebook, Linux CLI, Power BI
Soft Skills: AI Research Documentation, Research Paper Writing, Cross-functional Collaboration, Analytical Thinking, Curiosity-Driven Learning, Attention to Detail

Experience

Full Stack Developer Intern

09/2024 – 04/2025

Angel Infotech Group – Aurangabad

- Assisted in **developing and optimising AI/ML-adjacent solutions** for real-world applications; implemented **Python-based data pipelines** for data collection, validation, and preprocessing aligned with model input requirements.
- Performed **data annotation and validation** workflows across structured and unstructured datasets; applied **statistical reasoning** to ensure data quality and integrity before integration into production systems.
- Implemented **performance monitoring tools** and collaborated with **cross-functional teams** on scalable solution integration; maintained thorough **technical documentation** of methods and findings.

Software Engineer Intern

09/2023 – 05/2024

Sumago Infotech Pvt. Ltd. – Nashik

- Contributed to **ML model integration into production** pipelines; applied **orchestration and deployment best practices** to deliver validated AI-ready solutions and support **research documentation** with technical findings.
- Demonstrated **strong Python coding ability** in backend development; collaborated on **scalable system design** and participated in research-oriented exploration of new frameworks and methodologies.

Projects

Neural Network-Based Predictive Analytics | *Python, Scikit-learn, TensorFlow, NumPy, Pandas, Matplotlib*

- Designed and trained **deep learning models** (ANN, classification, regression) using **TensorFlow and Scikit-learn**; applied **mathematical optimisation, hyperparameter tuning, and statistical modelling** to evaluate and improve model performance.
- Prototyped **ML fairness evaluation** and feature engineering pipelines; interpreted existing **Python ML codebases** to adapt models across new problem domains – directly relevant to SHL's AI research workflow.

System Monitoring & Analytics Framework – IUCAA Pune | *Python, SQL, Linux CLI, NumPy, Power BI*

- Built **Python-based performance monitoring tools** for high-throughput computing clusters; implemented **automated anomaly detection** and generated research-quality statistical reports for engineering stakeholders.
- Applied **data collection, annotation, and validation** methodologies to cluster performance datasets; demonstrated **research documentation** skills through structured MIS-style reporting.

AI-Powered Finance Tracker | *Python, SQL, REST API, JavaScript, Chart.js*

- Implemented **NLP-inspired text classification and signal analysis** for real-time transaction categorization; integrated **REST APIs and generative AI concepts** to prototype an intelligent financial assistant – demonstrating **multimodal AI product** development skills.

Education

BE: Artificial Intelligence (AI) and Data Science (Computer Science)

Graduated: 2025

Savitribai Phule Pune University – Pune, Maharashtra

CGPA: 8.2 / 10

Certifications

- **AWS Cloud Technical Essentials** – AWS — **Introduction to Cloud Computing** – Coursera — **Foundations: Data, Data, Everywhere** – Google — **Introduction to IoT Embedded Systems** – UC Irvine

Achievements

- Secured **2nd Rank** in Techno Stellar IdeaGo Competition at MAEER's MIT Polytechnic – demonstrated **AI product conceptualisation, visionary thinking**, and ability to prototype innovative solutions under pressure.
